model n° c p 3

The CP3: Easily installed Replay Unit offers simple playback of your CP10xt designed shows or pre-programmed playback of Elektralite designs.

CP 3 Universal Controller

The CP-3 is the ideal controller where automation and plug-and-play technology are required. The CP-3 is available as a replay unit for the CP-10xt or as a pre-programmed unit.

Replay Unit

With a CP-10xt, create up to three completely different lightshows. You can use all 16 fixtures, all 600 cues and 99 chases.

Once you have prepared up to three lightshows, they can be simply downloaded into a CP-3 using only a midi cable, in just 90 seconds.

If later, any show needs reprogramming, it can be changed on the CP-10xt and downloaded into the CP-3.

The CP-3 is ideal in clubs, for small 'industrial' presentations, bowling centers, in fact, anywhere that needs a simple to use controller. A CP-3 can be put into a venue without having to have a qualified lighting person there to run it.

Just Look At These Features

- Can be used as Replay Unit for CP10xt or supplied with pre-programmed shows for popular fixtures.
- Easily installed
- Manual override of key functions.

Installer Friendly

The CP-3 was designed with the professional lighting contractor in mind. Complete ease of setup, 3 & 5 pin XLR jacks, audio input, a full 2 year warranty, make the CP-3 a complete solution for any entertainment application.

Pre-Programmed

The CP-3 is also available with pre-programmed shows for a variety of fixtures. These include products from Clay Paky, Elektralite, High End Systems, and Martin Professional.

A pre-programmed CP-3 comes with three different shows for three different fixture types. A total of up to 8 fixtures can be controlled. To use the CP-3, select from the three types of shows available (fast, medium or slow). Each show has many cues and chase patterns built specifically to enhance the best effects from the fixture type chosen. You can stop the show at anytime if you like a particular part of the program. The program will auto-repeat until manually released to return to automatic.

The speed at which the lights change from one program to another, can also be manually changed with the tempo button or it can be automatically controlled.

There is also an audio input which will synchronize the lighting to the music for the perfect light show.

Pre-Programmed Fixture Choices

There are many, so we list only a sample. Martin Roboscan, P-812, P-218, & P-518; H.E.S. Trackspot, Technobeam, & Intella-beam; Clay Paky MiniscanHPE, Silverado/Miniscan, GS-3, StageLight & StageColor 300; Elektralite Astrascan, HTI and Astrastar HTI.

Specifications

• Three pre-programmed shows	✓
• Auto start-up of the show when CP-3 is turned on	✓
• Manual over-ride of show	✓
• Black out	✓
• Audio input	✓
• Manual over-ride for speed control	✓
• Re-homing of fixtures.	✓
• Twin outputs (5 pin & 3 pin XLRs)	✓
• Standard 9 volt 500mA power supply	✓
• UL listed power input available in 100, 120, 220 or 240 Volts	✓
• Complies with F.C.C. Part 15, Class A, Canadian Interference and European CE regulations	✓
